TRANSPORT IS OUR BUSINESS - A DIVISION OF THE A. HARTRODT GROUP

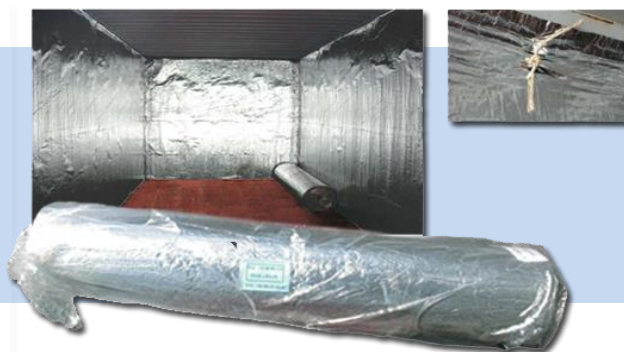

Insulation Equipment - Isokit

food & beverage logistics is able to offer different types of insulation equipment for container shipments. Our most popular insulation is the Isokit. This can be used to minimize temperature fluctuations or heat spikes during transit, when using a dry container.

What is a Isokit:

- ✓ The Isokit is a cool complex of air bubble double sided with kraft-aluminium paper BI50
- ✓ The flexible material allows you to use it in different ways: covering a single pallet for airfreight, roof, floor, doors, drums, full container lining and a special manufactured version dedicated to the building trade
- ✓ This alternative is often used to protect goods sensitive to temperature changes like foodstuff (wine and spirits, mineral water, chocolate products or cheese for example).
- ✓ The Insulation Isokit is manufactured to special dimensions suitable to the container market
- ✓ It is easy to remove and can be re-used.

With 2.35m height, it allows you to secure it to the top lashing ring of a container with a simple plastic cable tie or small rope.

Please do not hesitate to contact us for further information:
